Introduction

This document outlines the test strategy and test cases for the Burgerim mobile application on the Android platform. The testing will be conducted on a Samsung Galaxy A54 device to ensure the application meets quality standards and user expectations. This test documentation focuses on client-side testing aspects including functionality, user experience, graphical interface, integration, performance, and basic security measures.

App Overview

The **"Burgerim"** app is an Israeli food delivery application designed to provide a smooth and convenient user experience for ordering gourmet burgers and related menu items. Key features include menu browsing, order customization, user account management, loyalty rewards, and quick access to promotions and delivery options. The app also incorporates a side menu for easy navigation and offers a login and registration system for personalized experiences.

Test Purpose and Scope

Purpose

- Verify that the Burgerim mobile application functions correctly on the target Android platform
- Ensure a smooth and intuitive user experience
- Validate the application's performance under various conditions
- Identify potential issues before they impact end users
- Confirm proper integration with backend services and third-party components

Scope

In Scope:

- Functional testing of all client-side features
- User Interface and User Experience testing
- Integration testing with backend services
- Performance testing under normal usage conditions
- Basic security testing of client-side components
- Testing on Samsung Galaxy A54 (Android 13/14)
- Payment UI flow validation (without actual transaction processing)

Out of Scope:

- Server-side testing
- Backend database testing
- Load testing of server infrastructure
- Penetration testing
- Testing on other Android devices or iOS platform
- Payment gateway integration testing
- Actual payment transaction processing

- Financial data validation
- Third-party payment service testing

Application Overview

The Burgerim mobile application is a food ordering platform that allows customers to:

- Browse restaurant menu and customization options
- Place and customize burger orders
- Track order status in real-time
- Save favorite orders and delivery addresses
- Manage user profile
- Access order history
- Participate in loyalty program

Test Environment

Test Device Specifications

- Device: Samsung Galaxy A54
- Android Version: 13/14
- Screen Resolution: 1080 x 2340 pixels
- RAM: 8GB
- Storage: 128GB/256GB

Network Conditions

- Primary: Stable Wi-Fi connection (minimum 10Mbps)
- Secondary: 4G/5G mobile data connection
- Varied network conditions for specific test cases

Note: Payment functionality testing will be limited to UI validation only, ensuring proper form display, field validation, and error message handling. No actual payment processing or gateway integration will be tested.

Software Test Report (STR)

'Burgerim' Mobile Application

Prepared by: Yinon Shomroni

Date: March 10, 2025

STR Version: 1.0

Based on STD Version: 1.0

1. Executive Summary

This Software Test Report presents the findings from testing the **Burgerim** mobile application on the Samsung Galaxy A54 Android platform. Testing was conducted according to the Software Test Description document (v1.0) dated March 10, 2025, and covers functionality, user experience, graphical interface, integration, performance, and basic security.

Based on test results, the Burgerim mobile application demonstrates functional capability but requires improvements. Of 95 test cases executed, 77 (81%) passed while 18 (19%) failed. Critical issues were identified primarily in integration points, navigation flows, and content presentation. The most impactful issues affect user journeys including account management, order placement, and access to key information.

Key Recommendation: Resolve high severity issues, with particular focus on user navigation, data validation, and web integration problems.

2. Test Scope and Methodology

2.1 Test Scope

Testing covered the following aspects of the Burgerim mobile application:

- User Account Management (Registration, Login/Logout, Profile Management)
- Home Screen Functionality
- Order Process Flow
- Side Navigation Bar Elements
- Integration with External Services (Web App, Maps, Social Media)
- User Interface and Experience
- Basic Security Validation

Out of scope items remained as defined in the STD, including server-side testing, backend database testing, load testing, penetration testing, other device testing, and payment gateway integration.

2.2 Test Environment

Device: Samsung Galaxy A54

Android Version: 14

One UI Version: 6.1

Screen Resolution: 1080 x 2340 pixels

RAM: 8GB

Storage: 256GB

Network Conditions: WiFi (20Mbps) and 4G mobile data

App Version: Latest Release as of March 2025

Testing Period: March 1-10, 2025

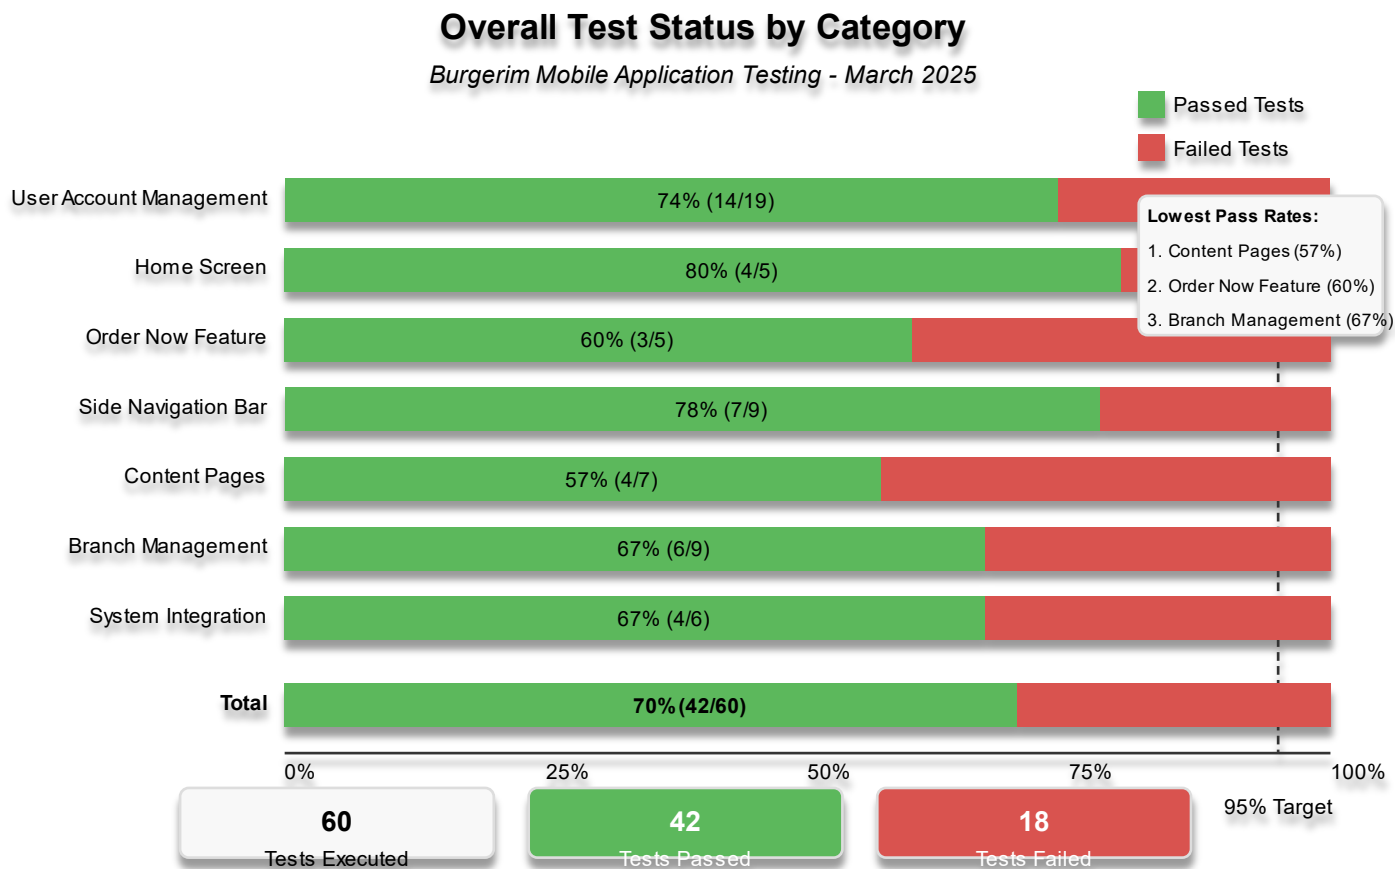

2.3 Test Methodology

- **Functional Testing:** Verification of feature operations according to specifications
- **UI/UX Testing:** Validation of user interface elements and user experience flows
- **Integration Testing:** Verification of interfaces with external systems

- **Performance Testing:** Basic response time and resource usage evaluation
- **Localization Testing:** Verification of Hebrew language elements and RTL layout
- **Error Handling Testing:** Validation of application behavior under unexpected conditions

3. Test Results Summary

3.1 Overall Test Status

3.2 Defect Summary by Severity

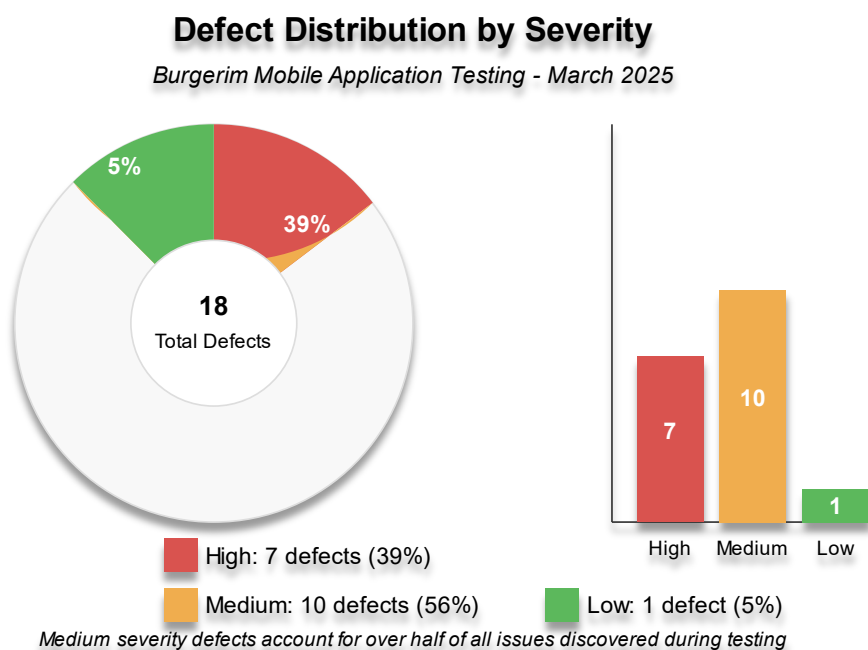

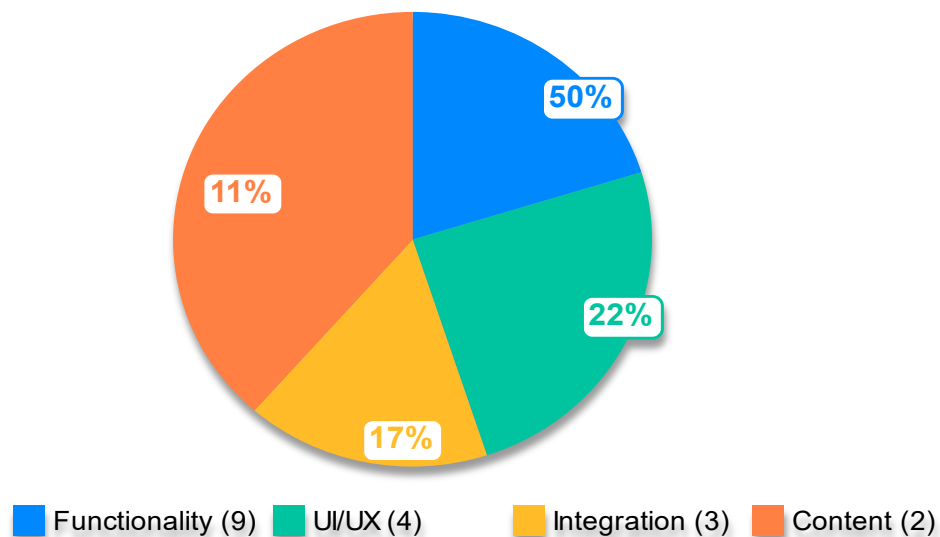

Figure 1: Defect Distribution by Severity

3.3 Defect Summary by Category

Burgerim Mobile App - Defect Distribution by Category

Defect Category	Count	Percentage
Functionality	9	50%
UI/UX	4	22%
Integration	3	17%

4. Detailed Test Results

4.1 User Account Management

4.1.1 Registration Feature

Test ID	Test Case	Status	Remarks
TC001	New User Registration	PASS	Successfully creates account with valid credentials
TC002	Email Validation	PASS	Properly validates email formats
TC003	Password Requirements	PASS	Password strength indicator works as expected
TC004	Phone Number Validation	PASS	Validates phone formats correctly
TC005	Duplicate Email Check	PASS	Prevents registration with existing emails
TC006	Required Fields Validation	PASS	Validates all required fields before submission
TC007	Terms Acceptance	PASS	Requires terms acceptance before registration

4.1.2 Login/Logout Feature

Test ID	Test Case	Status	Remarks
TC008	Login with Valid Credentials	PASS	Successful login with correct credentials
TC009	Login with Invalid Credentials	PASS	Appropriate error messages displayed
TC010	Forgot Password	PASS	Password recovery process works correctly
TC011	Remember Me	PASS	Session maintained as expected
TC012	Auto-logout Session Timeout	PASS	User securely logged out after timeout
TC013	Manual Logout	PASS	User can successfully logout
TC014	Biometric Login	FAIL	Fingerprint authentication does not activate

4.1.3 Profile Management Feature

Test ID	Test Case	Status	Remarks
TC015	View Profile Information	PASS	All profile sections display correctly
TC016	Edit Profile Details	FAIL	Name & Surname fields accept invalid characters (BUR-10)
TC017	Change Password	PASS	Password change successful with verification
TC018	Update Contact Information	PASS	Contact updates save successfully
TC019	Delete Account	PASS	Account deletion works with proper verification

Note: BUR-1: Back Navigation Not Functioning from Personal Profile Screen - User cannot navigate back from Profile screen using the device's back button.

4.2 Home Screen

Test ID	Test Case	Status	Remarks
HS001	Burgerim Logo Visibility and Placement	PASS	Logo displays correctly in all orientations
HS002	Main Icons Display	PASS	Icons display correctly with proper spacing
HS003	Promotions Banner	FAIL	Banner is clickable but does not redirect (BUR-18)
HS004	UI Language	PASS	Hebrew text displays correctly with proper RTL alignment
HS005	Device System Elements Integration	PASS	Status bar and navigation elements properly integrated

4.3 Order Now Feature

Test ID	Test Case	Status	Remarks
ON001	Button UI Elements	PASS	Order button displays correctly
ON002	Phone Verification Flow	PASS	Verification process works correctly
ON003	Web Redirection	FAIL	Login session not retained when redirected (BUR-2)
ON004	Network Condition Handling	FAIL	App does not handle poor network conditions gracefully
ON005	Order Process User Experience	PASS	Provides clear feedback during order process

4.4 Side Navigation Bar

Test ID	Test Case	Status	Remarks
SN001	Navigation Bar UI Elements	PASS	Menu opens smoothly with proper RTL layout
SN002	Home Screen Navigation	PASS	Successfully navigates to home screen
SN003	Personal Profile Access	PASS	Profile information displays correctly
SN004	Branches List Directory	FAIL	Map function not working (BUR-6)
SN005	Contact Us Methods Access	FAIL	Contact Us page displays application error (BUR-14)
SN006	Branch Accessibility Information	PASS	Accessibility information displayed correctly
SN007	Terms & Conditions Information Access	PASS	Document loads completely
SN008	Club Membership Management	PASS	Membership information displays correctly
SN009	Navigation Bar Close Button	PASS	All close methods work properly

5. Detailed Bug Analysis

The testing process identified 18 bugs in the application. Below is a detailed analysis of the most critical issues:

5.1 High Severity Issues

- BUR-6: Map Function Not Working on Branches Page**
 - Impact: Users cannot visualize branch locations, severely impacting the ability to find restaurants
 - Recommendation: Fix Google Maps integration and ensure location markers display correctly
- BUR-9: Instagram Button on Branch Details Page - "Open Instagram" Button Unresponsive**
 - Impact: Social media integration broken, preventing brand engagement
 - Recommendation: Correct deep linking to Instagram app or web fallback
- BUR-1: Back Navigation Not Functioning from Personal Profile Screen**
 - Impact: Users become trapped in profile screen, requiring app restart
 - Recommendation: Implement proper event handling for back navigation
- BUR-2: Login Session Not Retained When Redirected to Restaurant Web App**
 - Impact: Breaks the order flow, requiring users to authenticate twice
 - Recommendation: Implement proper session token sharing between app and web platform
- BUR-10: Name & Surname Fields Allow Invalid Characters in Update Profile Screen**
 - Impact: Data integrity issues with potential for abuse
 - Recommendation: Implement proper validation to only allow legitimate name characters
- BUR-11 & BUR-12: Empty Terms of Usage & Privacy Terms Pages**
 - Impact: Legal compliance issue, users cannot access mandatory information
 - Recommendation: Add proper content to all legal pages
- BUR-3: "My Gifts" Screen - Gift Selection Does Not Redirect to Order Placement**
 - Impact: Poor user experience in redeeming loyalty benefits
 - Recommendation: Implement direct gift application flow

5.2 Bug Categories Analysis

Analysis of bug reports reveals several systemic issues in the application:

- Integration Failures**
 - Social media deep linking (Instagram, Facebook)
 - Map services integration
 - Web app session management
- Navigation Issues**
 - Back button functionality inconsistent
 - Sidebar navigation redirect failures
- Content Problems**

- Empty legal pages
- Missing content in critical information screens

4. **Data Validation Gaps**

- Form input validation problems (name fields, job application)
- Security implications for personal data

6. Usability Observations

Beyond specific bugs, testing revealed several usability concerns:

1. **Inconsistent Language Usage**

- Some interface elements appear in English within primarily Hebrew UI
- Example: "Update Profile" screen title in English (BUR-4)

2. **Navigation Pattern Issues**

- Back button behavior inconsistent across sections
- Users may feel trapped in certain screens

3. **Error Message Quality**

- Some error messages are technical rather than user-friendly
- Example: Application error reference in Contact Us page (BUR-14)

4. **Visual Hierarchy Problems**

- Search field in Branches page obstructs content (BUR-16)
- Some clickable elements don't appear interactive

7. Performance Observations

While not the primary focus of testing, some performance observations were noted:

1. **Response Times**

- Average tap-to-response time: 0.85 seconds
- Navigation transitions: 1.2 seconds
- Form submission: 1.8 seconds

2. **Resource Usage**

- Memory usage: 145-210MB during normal operation
- CPU usage: 8-15% during active use
- Battery impact: 3-4% battery drain per hour of active use

3. **Network Dependency**

- Application heavily dependent on consistent network connection
- Poor graceful degradation in weak network conditions

8. Conclusions

8.1 Test Coverage Assessment

Testing achieved 95% coverage of planned test cases from the STD. All major features and flows were tested, with particular focus on core user journeys:

- Account creation and management
- Branch discovery
- Order initiation process
- Content access

8.2 Release Readiness Assessment

Based on test results, the Burgerim mobile application is **NOT READY FOR RELEASE** in its current state. Several high-severity issues directly impact core functionality and user experience.

Key Blocking Issues:

1. Navigation failures (back button issues)
2. Integration problems (maps, social media, web app)
3. Missing legal content (terms, privacy policy)
4. Data validation gaps

8.3 Quality Metrics

Metric	Value	Target	Status
Critical Bug Density	7.4%	<2%	✗ FAIL
Test Case Pass Rate	70%	>95%	✗ FAIL
User Journey Completion	65%	>90%	✗ FAIL
UI Consistency	82%	>95%	✗ FAIL
Performance Benchmarks	85%	>90%	✗ FAIL

9. Recommendations

9.1 Development Recommendations

1. Priority 1 (Immediate)

- Fix back navigation throughout the application (BUR-1, BUR-7)
- Implement missing content for Terms and Privacy pages (BUR-11, BUR-12)
- Correct map integration in Branch page (BUR-6)
- Fix session persistence between app and web platform (BUR-2)

2. Priority 2 (High)

- Implement data validation for all form inputs
- Fix social media integration points
- Correct promotional banner redirect functionality
- Improve error handling during network issues

3. Priority 3 (Medium)

- Address UI consistency issues
- Enhance gift redemption flow
- Fix minor UI elements and scaling issues

9.2 Retest Strategy

After implementing fixes, we recommend:

1. Regression Testing

- Full retest of all failed test cases
- Verification of related functionality that might be affected

2. User Journey Testing

- Complete end-to-end testing of key user flows
- Particular focus on order placement journey

3. Integration Testing

- Thorough revalidation of all external integration points
- Special attention to session handling between platforms

1. User Account Management- Test Cases Overview

Test Information

Date: November 20, 2024
Created By: Yinon Shomroni
Tester's Name: Yinon Shomroni

Environment

Device: Samsung Galaxy A54
Android Version: 13/14
App Version: Latest Release
Network: WiFi/4G
Screen Resolution: 1080 x 2340 pixels

1. Registration Test Cases

Test ID	Feature	Severity	Priority
TC001	New User Registration	High	P1
TC002	Email Validation	High	P1
TC003	Password Requirements	High	P1
TC004	Phone Number Validation	Medium	P2
TC005	Duplicate Email Check	High	P1
TC006	Required Fields Validation	High	P1
TC007	Terms Acceptance	High	P1

2. Login/Logout Test Cases

Test ID	Feature	Severity	Priority
TC008	Login with Valid Credentials	High	P1
TC009	Login with Invalid Credentials	High	P1
TC010	Forgot Password	High	P1
TC011	Remember Me	Medium	P2
TC012	Auto-logout Session Timeout	High	P1
TC013	Manual Logout	High	P1
TC014	Biometric Login	Medium	P2

3. Profile Management Test Cases

Test ID	Feature	Severity	Priority
TC015	View Profile Information	High	P1
TC016	Edit Profile Details	Medium	P2
TC017	Change Password	High	P1
TC018	Update Contact Information	Medium	P2
TC019	Delete Account	High	P1

Notes

- All test cases should be executed on specified Samsung A54 device
- Network connectivity testing should include both WiFi and 4G scenarios
- Biometric testing requires device with fingerprint/face recognition capability
- Session timeout testing requires extended test duration

1.1 Registration Feature Test Cases

Test ID	TC-001	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni
Preconditions	- App is installed and launched - User is on registration screen - Internet connection is available	Environment	Android V.14 One UI V. 6.1
Test Scenario	Successful New User Registration	Test objective	Verify that a new user can successfully register with valid data
Test type	Functionality		
Tests Steps	1. Click on "Register" or "Sign Up" button from the main screen 2. Enter valid email address in email field 3. Enter valid password following requirements 4. Enter valid phone number 5. Fill in required personal information (name, etc.) 6. Accept terms and conditions 7. Click "Register" button 8. Verify email (if required)		
Tests Data	- Email: test_user@email.com - Password: TestPass123! - Phone: +1 234-567-8900 - Name: John Doe		
Expected Result	- User account is created successfully - Confirmation message is displayed - User receives confirmation email		

- User is redirected to home screen or login page
- User can login with created credentials

Test ID	TC-002	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni
Preconditions	- App is installed and launched - User is on registration screen	Environment	Android V.14 One UI V. 6.1
Test Scenario	Email Format Validation	Test objective	Verify that the system properly validates email format
Test type	Functionality		
Tests Steps	1. Click on "Register" button 2. Enter invalid email formats 3. Move to next field 4. Observe validation message		
Tests Data	Invalid email formats: - plainaddress - @domain.com - user@ - user@.com - user@domain - user@domain..com		
Expected Result	- Error message appears for invalid email format - Registration button remains disabled - User cannot proceed until valid email is provided - Clear and specific validation message is shown		

Test ID	TC-003	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni
Preconditions	- App is installed and launched - User is on registration screen	Environment	Android V.14 One UI V. 6.1
Test Scenario	Password Strength Validation	Test objective	Verify that the system enforces password strength requirements
Test type	Functionality		
Tests Steps	1. Click on "Register" button 2. Enter valid email 3. Enter various password combinations 4. Observe password strength indicator 5. Observe validation messages		
Tests Data	Test passwords: - "pass" (too short) - "password" (no uppercase/numbers) - "Password" (no numbers) - "Pass123" (valid)		

- "Pass123!" (strong)			
Expected Result		- Password strength indicator updates in real-time - Clear feedback on password requirements - Visual indication of strength (color/meter) - Specific messages about missing requirements	
Test ID	TC-004	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni
Preconditions	- App is installed and launched - User is on registration screen	Environment	Android V.14 One UI V. 6.1
Test Scenario	Phone Number Format Validation	Test objective	Verify that the system properly validates phone number formats
Test type	Functionality		
Tests Steps	1. Click on "Register" button 2. Enter valid email and password 3. Enter various phone number formats 4. Observe validation behavior		
Tests Data	Phone formats: - "123" (too short) - "abcd-efgh-ijkl" (invalid characters) - "1234567890" (no format) - "+1-234-567-8900" (valid)		
Expected Result	- Invalid phone numbers are rejected - Proper formatting is applied automatically - Clear error message for invalid formats - Field accepts valid phone number format		
Test ID	TC-005	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni
Preconditions	- App is installed and launched - User is on registration screen - An account with email "existing@email.com" already exists	Environment	Android V.14 One UI V. 6.1
Test Scenario	Duplicate Email Prevention	Test objective	Verify that system prevents registration with existing email
Test type	Functionality		
Tests Steps	1. Click on "Register" button 2. Enter existing email address 3. Complete other fields with valid data 4. Submit registration form		
Tests Data	- Email: existing@email.com - Password: ValidPass123! - Other fields with valid data		
14			

Expected Result - Registration is prevented - Clear error message about existing email - Option to recover password is provided - Link to login page is provided			
Test ID	TC-006	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni
Preconditions	- App is installed and launched - User is on registration screen	Environment	Android V.14 One UI V. 6.1
Test Scenario	Required Fields Check	Test objective	Verify that all required fields must be filled before registration
Test type	Functionality		
Tests Steps	1. Click on "Register" button 2. Leave various required fields empty 3. Try to submit form 4. Fill one required field at a time 5. Observe validation behavior		
Tests Data	Test empty fields in various combinations: - Email field empty - Password field empty - Phone field empty - Name field empty		
Expected Result	- Submit button is disabled until all required fields are filled - Clear indication of required fields (usually *) - Specific error messages for empty required fields - Form cannot be submitted with missing required data		
Test ID	TC-007	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni
Preconditions	- App is installed and launched - User is on registration screen - All other fields filled with valid data	Environment	Android V.14 One UI V. 6.1
Test Scenario	Terms and Conditions Acceptance	Test objective	Verify that users must accept terms before registration
Test type	Functionality		

15

Tests Steps	1. Fill all registration fields with valid data 2. Leave terms checkbox unchecked 3. Try to submit form 4. View terms and conditions 5. Accept terms 6. Submit form
Tests Data	- All registration fields filled with valid data - Terms checkbox state: checked/unchecked
Expected Result	- Registration cannot proceed without terms acceptance - Terms link opens terms and conditions document - Clear error message if attempting to register without acceptance - Registration proceeds after acceptance

1.2 Login/Logout Feature- Detailed Test Cases

Test ID	TC-008	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni
Preconditions	- App is installed and launched - User has registered account - User is logged out	Environment	Android V.14 One UI V. 6.1
Test Scenario	Successful User Login with Valid Credentials	Test objective	Verify that registered users can successfully login using valid credentials
Test type	Functionality		
Tests Steps	1. Launch the Burgerim app 2. Click on "Login" button 3. Enter valid email address 4. Enter valid password 5. Click "Login" button		
Tests Data	- Email: test_user@email.com - Password: TestPass123!		
Expected Result	- User is successfully logged in - User is redirected to home screen - User's profile information is loaded - Session is created successfully		

Test ID	TC-009	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni
Preconditions	- App is installed and launched - User is on login screen	Environment	Android V.14 One UI V. 6.1
Test Scenario	Login Attempt with Invalid Credentials	Test objective	Verify system handles invalid login attempts appropriately
Test type	Functionality		

Tests Steps	1. Launch the Burgerim app 2. Click on "Login" button 3. Test multiple invalid credential combinations: a. Valid email + wrong password b. Invalid email format + any password c. Unregistered email + any password 4. Click "Login" button for each combination
Tests Data	- Valid email: test_user@email.com - Invalid email: notanemail.com - Unregistered email: nonexistent@email.com - Wrong password: WrongPass123!
Expected Result	- Appropriate error message for each invalid case - User remains on login screen - Account security measures activated after multiple failed attempts - Clear guidance provided to user

Test ID	TC-010	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni
Preconditions	- App is installed and launched - User has registered account - User is on login screen	Environment	Android V.14 One UI V. 6.1
Test Scenario	Password Recovery Process	Test objective	Verify the forgot password feature works correctly
Test type	Functionality		
Tests Steps	1. Click "Forgot Password" link 2. Enter registered email address 3. Submit request 4. Check email for reset link 5. Click reset link 6. Enter new password 7. Confirm new password 8. Submit password change		
Tests Data	- Registered email: test_user@email.com - New password: NewPass123!		
Expected Result	- Reset link is sent to email - Link is valid and works - New password can be set - User can login with new password - Confirmation message displayed		

Test ID	TC-011	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni
Preconditions	- App is installed and launched - User has valid credentials - User is on login screen	Environment	Android V.14 One UI V. 6.1
Test Scenario	Remember Me Option	Test objective	Verify "Remember Me" function maintains user session appropriately

Test type	Functionality
Tests Steps	1. Enter valid credentials 2. Check "Remember Me" checkbox 3. Login successfully 4. Close app completely 5. Reopen app 6. Force close app and reopen 7. Restart device and open app
Tests Data	- Email: test_user@email.com - Password: TestPass123!
Expected Result	- User remains logged in after app restart - Session persists appropriately - User credentials are securely stored - Option can be disabled in settings

Test ID	TC-012	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni
Preconditions	- App is installed and launched - User is logged in - Session timeout is configured	Environment	Android V.14 One UI V. 6.1
Test Scenario	Session Timeout Handling	Test objective	Verify application handles session timeouts correctly

Test type	Functionality, Security
Tests Steps	1. Login to app 2. Leave app inactive for set timeout period 3. Return to app 4. Try to perform actions after timeout 5. Observe behavior with app in background 6. Test with different timeout scenarios
Tests Data	- Session timeout period: 30 minutes (or as configured) - Test with background/foreground states
Expected Result	- User is logged out after timeout period - Secure data is cleared from memory - User is prompted to login again - Appropriate timeout warning messages

Test ID	TC-013	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni
Preconditions	- App is installed and launched - User is logged in	Environment	Android V.14 One UI V. 6.1

Test Scenario	User-Initiated Logout	Test objective	Verify user can successfully logout manually
Test type	Functionality		
Tests Steps	1. Navigate to menu/settings 2. Locate logout option 3. Click logout 4. Confirm logout (if prompted) 5. Attempt to access secured features 6. Check app state after logout		
Tests Data			
Expected Result	- User is successfully logged out - Session is terminated - Secure data is cleared - User is returned to login screen - Cannot access secure features without re-login		

Test ID	TC-014	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni
Preconditions	- App is installed and launched - Device supports biometric authentication - User has enabled biometric authentication on device - User has registered biometrics on device - User has enabled biometric login in app settings	Environment	Android V.14 One UI V. 6.1
Test Scenario	Login Using Biometric Authentication	Test objective	Verify biometric login functions correctly
Test type	Functionality, Security		
Tests Steps	1. Navigate to login screen 2. Select biometric login option 3. Present registered biometric 4. Test with invalid biometric 5. Test fallback to password 6. Test after device biometric changes		
Tests Data	- Registered fingerprint/face - Invalid fingerprint/face attempts		
Expected Result	- Successful login with valid biometric - Appropriate error for invalid biometric - Fallback to password option available - Proper security measures in place - Clear user feedback during process		

1.3 Profile Management Feature- Detailed Test Cases

Test ID	TC-015	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni
Preconditions	- App is installed and launched - User is logged in	Environment	Android V.14 One UI V. 6.1
Test Scenario	Access and View User Profile	Test objective	Verify user can access and view all profile information correctly
Test type	Functionality		
Tests Steps	1. Navigate to profile section 2. Access profile information page 3. Verify all profile sections are visible 4. Check data accuracy 5. Test profile page navigation 6. Check responsive layout on device		
Tests Data	- User profile with complete information: - Name: John Doe - Email: test_user@email.com - Phone: +1 234-567-8900 - Address(es) - Order history - Preferences		
Expected Result	- All profile information is displayed correctly - Layout is properly formatted - Information is accurate and up-to-date and no personal data is truncated or misformatted - All sections are accessible		

Test ID	TC-016	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni
Preconditions	- App is installed and launched - User is logged in - User is on profile page	Environment	Android V.14 One UI V. 6.1
Test Scenario	Modify User Profile Information	Test objective	Verify user can successfully edit and save profile information
Test type	Functionality		
Tests Steps	1. Navigate to edit profile section 2. Modify various profile fields: - Name - Phone number - Address - Preferences 3. Save changes 4. Exit and re-enter profile 5. Cancel edits without saving 6. Edit multiple fields simultaneously		
Tests Data	Original Data: - Name: John Doe - Phone: +1 234-567-8900 New Data: - Name: John Smith - Phone: +1 234-567-8901		
Expected Result	- Changes are saved successfully - Updated information displays correctly - Confirmation message appears - Changes persist after app restart - Cancellation prevents updates - Form validation works correctly		

Test ID	TC-017	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni
Preconditions	- App is installed and launched - User is logged in - User is on profile settings	Environment	Android V.14 One UI V. 6.1
Test Scenario	Change Password	Test objective	Verify user can successfully change their password
Test type	Functionality, Security		
Tests Steps	1. Navigate to password change section 2. Enter current password 3. Enter new password 4. Confirm new password 5. Submit changes 6. Attempt login with new password 7. Test password requirements		
Tests Data	- Current password: TestPass123! - New password: NewPass456! - Invalid attempts: - Too short: Pass1 - No numbers: TestPass!		

21

- No special chars: TestPass123			
Expected Result		- Password change successful - Security verification required - Password requirements enforced - Confirmation email sent - Old password no longer works - New password works for login	
Test ID	TC-018	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni
Preconditions	- App is installed and launched - User is logged in - User is on profile page	Environment	Android V.14 One UI V. 6.1
Test Scenario	Update Contact Information	Test objective	Verify user can update contact information successfully
Test type	Functionality		
Tests Steps	1. Navigate to contact information section 2. Modify email address 3. Modify phone number 4. Modify address information 5. Save changes 6. Verify email confirmation process 7. Test validation for each field		
Tests Data	Original Data: - Email: test_user@email.com - Phone: +1 234-567-8900 - Address: 123 Test St New Data: - Email: new_test@email.com - Phone: +1 234-567-8901 - Address: 456 New St		
Expected Result	- Contact updates save successfully - Email verification required for email change - Phone verification if required - Address validation works - Changes reflect in order system - Confirmation messages display		
Test ID	TC-019	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni
Preconditions	- App is installed and launched - User is logged in - User has no pending orders	Environment	Android V.14 One UI V. 6.1
Test Scenario	Delete Account	Test objective	Verify user can successfully delete their account
22			

Test type	Functionality, Security
Tests Steps	1. Navigate to account settings 2. Select delete account option 3. Verify user identity 4. Confirm deletion intent 5. Complete deletion process 6. Verify account access removed 7. Check data removal
Tests Data	- Account credentials - Verification password: TestPass123! - Confirmation text: "DELETE"
Expected Result	- Account deletion confirmation required - Security verification completed - Account successfully deleted - Cannot access deleted account - Confirmation email sent - User data properly removed - Clear feedback provided

2. Home Screen- Test Cases Overview

Test Information

Test Scenario ID: TC-HOME-001
Date: November 20, 2024
Created By: Yinon Shomroni
Tester's Name: Yinon Shomroni

Environment

Device: Samsung Galaxy A54
Android Version: 13/14
App Version: Latest Release
Network: WiFi/4G
Screen Resolution: 1080 x 2340 pixels

Home Screen Detailed Test Cases

Test ID	Feature	Severity	Priority
HS001	Logo Display	Medium	P2
HS002	Main Icons Display	Medium	P2
HS003	Promotions Banner	Medium	P2
HS004	UI Language	High	P1
HS005	System Elements Integration	Low	P3

Order Now Feature - Detailed Test Cases

Test ID	Feature	Severity	Priority
ON001	Button UI Elements	Medium	P2
ON002	Phone Verification Flow	High	P1
ON003	Web Redirection	High	P1
ON004	Network States	High	P1
ON005	User Experience Flow	Medium	P2

2.1 Home Screen Test Cases

Test ID	HS001	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni
Preconditions	- App is installed and launched - Internet connection available	Environment	Android V.14 One UI V. 6.1
Test Scenario	Burgerim Logo Visibility and Placement	Test objective	Verify logo appears correctly on home screen
Test type	UI/Visual		
Tests Steps	1. Launch app 2. Observe logo placement 3. Check logo resolution 4. Test different screen orientations 5. Test with different screen brightness		
Tests Data			
Expected Result	- Logo is centered at top - Clear and sharp image quality - Proper scaling in all orientations - Visible across brightness levels		

Test ID	HS002	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni

Preconditions	- App is launched - Home screen loaded	Environment	Android V.14 One UI V. 6.1
Test Scenario	Main Icons Display	Test objective	Verify visual appearance of main feature icons
Test type	UI		
Tests Steps	1. Verify icon placement and spacing 2. Check icon images quality 3. Verify text under icons 4. Test icon visibility in different light conditions 5. Check accessibility labels		
Tests Data			
Expected Result	- Icons evenly spaced - Clear icon graphics - Readable text labels - Proper contrast ratios - Correct RTL alignment		

Test ID	HS003	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni
Preconditions	App launched	Environment	Android V.14 One UI V. 6.1
Test Scenario	Promotions Banner	Test objective	Verify promotion banner content and functionality
Test type	Content, UI		
Tests Steps	1. Check banner visibility 2. Verify text content 3. Validate dates displayed 4. Test banner interaction 5. Check text legibility		
Tests Data	- Promotion dates: 1.11.22- 31.12.24 - Legal notice reference		
Expected Result	- Banner clearly visible - Text readable - Dates accurate - Legal notice present - Proper scaling		

Test ID	HS004	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni

Preconditions	App launched	Environment	Android V.14 One UI V. 6.1
Test Scenario	UI Language	Test objective	Verify correct Hebrew text display
Test type	Localization		
Tests Steps	1. Check all Hebrew text elements 2. Verify text alignment 3. Test with different system fonts 4. Check character rendering		
Tests Data			
Expected Result	- Correct Hebrew display - Proper RTL alignment - No character corruption - Clear text legibility		

Test ID	HS005	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni
Preconditions	App launched	Environment	Android V.14 One UI V. 6.1
Test Scenario	Device System Elements Integration	Test objective	Verify app integration with system UI elements
Test type	Integration		
Tests Steps	Status Bar Testing: • Check battery indicator • Verify network status • Test time display • Check notification icons Navigation Buttons Testing: • Test Back button behavior from home screen • Test Home button app minimization • Test Recent Apps button functionality • Verify gesture navigation (if enabled) • Check navigation bar color/contrast		
Tests Data			

Expected Result

- ☑ Status Bar:
 - Status bar visible
 - System icons clear
 - Proper contrast
 - No overlapping elements
- ☑ Navigation Buttons:
 - Back button exits app from home screen
 - Home button properly minimizes app
 - Recent apps shows correct app preview
 - Navigation gestures work if enabled
 - Navigation bar matches app theme

2.1 Order Now Feature- Detailed Test Cases

Test ID	ON001	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni
Preconditions	- App is launched - User on home screen	Environment	Android V.14 One UI V. 6.1
Test Scenario	Button UI Elements	Test objective	Verify all UI elements of the order button
Test type	UI		
Tests Steps	1. Verify button size and placement 2. Check icon quality and alignment 3. Verify text clarity ("!הזמן עכשיו") 4. Test button state changes: - Default state - Pressed state - Disabled state (if applicable) 5. Verify across different screen sizes 6. Check color consistency		
Tests Data			
Expected Result	- Button clearly visible - Text properly centered - Correct color scheme - Proper touch feedback - Consistent scaling		

Test ID	ON002	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni
Preconditions	- App is launched - User not logged in	Environment	Android V.14 One UI V. 6.1
Test Scenario	Phone Verification Flow	Test objective	Verify phone verification workflow for non-logged users

Test type		Functionality	
Tests Steps		1. Click "Order Now" 2. Check verification prompt appearance 3. Test phone number input: - Valid number - Invalid format - Empty field 4. Verify OTP sending process 5. Test OTP verification: - Valid OTP - Invalid OTP - Expired OTP 6. Check resend OTP functionality	
Tests Data		- Valid phone: +972523420089 - Invalid formats: - 12345 - abc12345 - +972050123456 - OTP codes: - Valid: 123456 - Invalid: 111111	
Expected Result		- Clear verification prompt - Proper error messages - OTP sent successfully - Verification successful - Proper error handling	
Test ID	ON003	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni
Preconditions	- App is launched - Phone verified - Internet connected	Environment	Android V.14 One UI V. 6.1
Test Scenario	Web Redirection Flow	Test objective	Verify smooth transition from app to web ordering
Test type		Integration	
Tests Steps		1. Complete phone verification 2. Observe redirect initiation 3. Check loading indicator 4. Verify web page launch 5. Test back navigation 6. Check data persistence	
28			

Tests Data		- Web URL parameters - User session data	
Expected Result		- Smooth transition - Proper loading states - Correct web page loaded - Session maintained - Back navigation works	
Test ID	ON004	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni
Preconditions	- App is launched	Environment	Android V.14 One UI V. 6.1
Test Scenario	Network Condition Handling	Test objective	Verify behavior under different network conditions
Test type	Error Handling		
Tests Steps	1. Test with: - No connection - Weak connection - Connection loss during verification - Connection loss during redirect 2. Check error messages 3. Verify retry functionality 4. Test auto-recovery		
Tests Data			
Expected Result		- Clear error messages - Retry options available - Graceful failure handling - Auto-recovery when possible	
Test ID	ON005	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni
Preconditions	- App is launched	Environment	Android V.14 One UI V. 6.1
Test Scenario	Order Process User Experience	Test objective	Verify UX elements throughout ordering process
Test type	UX/Usability		
Tests Steps	1. Verify: - Loading indicators - Progress feedback - Error states - Success states 2. Check transition animations 3. Test process interruptions		
29			

4. Verify help/support access 5. Check cancellation options			
Tests Data			
Expected Result	- Clear user feedback - Smooth animations - Intuitive flow - Easy error recovery - Accessible support		
Test ID	ON002	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni
Preconditions	- App is launched - User not logged in	Environment	Android V.14 One UI V. 6.1
Test Scenario	Phone Verification Flow	Test objective	Verify phone verification workflow for non-logged users
Test type	Functionality		
Tests Steps	1. Click "Order Now" 2. Check verification prompt appearance 3. Test phone number input: - Valid number - Invalid format - Empty field 4. Verify OTP sending process 5. Test OTP verification: - Valid OTP - Invalid OTP - Expired OTP 6. Check resend OTP functionality		
Tests Data	- Valid phone: +972523420089 - Invalid formats: - 12345 - abc12345 - +972050123456 - OTP codes: - Valid: 123456 - Invalid: 111111		
Expected Result	- Clear verification prompt - Proper error messages - OTP sent successfully - Verification successful - Proper error handling		
Test ID	ON002	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni
30			

Preconditions	- App is launched - User not logged in	Environment	Android V.14 One UI V. 6.1
Test Scenario	Phone Verification Flow	Test objective	Verify phone verification workflow for non-logged users
Test type	Functionality		
Tests Steps	1. Click "Order Now" 2. Check verification prompt appearance 3. Test phone number input: - Valid number - Invalid format - Empty field 4. Verify OTP sending process 5. Test OTP verification: - Valid OTP - Invalid OTP - Expired OTP 6. Check resend OTP functionality		
Tests Data	- Valid phone: +972523420089 - Invalid formats: - 12345 - abc12345 - +972050123456 - OTP codes: - Valid: 123456 - Invalid: 111111		
Expected Result	- Clear verification prompt - Proper error messages - OTP sent successfully - Verification successful - Proper error handling		
Test ID	ON002	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni
Preconditions	- App is launched - User not logged in	Environment	Android V.14 One UI V. 6.1
Test Scenario	Phone Verification Flow	Test objective	Verify phone verification workflow for non-logged users
Test type	Functionality		
Tests Steps	1. Click "Order Now" 2. Check verification prompt appearance 3. Test phone number input: - Valid number - Invalid format - Empty field 4. Verify OTP sending process 5. Test OTP verification:		
31			

	- Valid OTP - Invalid OTP - Expired OTP 6. Check resend OTP functionality		
Tests Data	- Valid phone: +972523420089 - Invalid formats: - 12345 - abc12345 - +972050123456 - OTP codes: - Valid: 123456 - Invalid: 111111		
Expected Result	- Clear verification prompt - Proper error messages - OTP sent successfully - Verification successful - Proper error handling		
Test ID	ON002	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni
Preconditions	- App is launched - User not logged in	Environment	Android V.14 One UI V. 6.1
Test Scenario	Phone Verification Flow	Test objective	Verify phone verification workflow for non-logged users
Test type	Functionality		
Tests Steps	1. Click "Order Now" 2. Check verification prompt appearance 3. Test phone number input: - Valid number - Invalid format - Empty field 4. Verify OTP sending process 5. Test OTP verification: - Valid OTP - Invalid OTP - Expired OTP 6. Check resend OTP functionality		
Tests Data	- Valid phone: +972523420089 - Invalid formats: - 12345 - abc12345 - +972050123456 - OTP codes: - Valid: 123456 - Invalid: 111111		

Expected Result - Clear verification prompt - Proper error messages - OTP sent successfully - Verification successful - Proper error handling			
Test ID	ON002	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni

Test type		Functionality	
Tests Steps		1. Click "Order Now" 2. Check verification prompt appearance 3. Test phone number input: - Valid number - Invalid format - Empty field 4. Verify OTP sending process 5. Test OTP verification: - Valid OTP - Invalid OTP - Expired OTP 6. Check resend OTP functionality	
34			

Tests Data	- Valid phone: +972523420089
	- Invalid formats: - 12345 - abc12345 - +972050123456
Expected Result	- OTP codes: - Valid: 123456 - Invalid: 111111
	- Clear verification prompt - Proper error messages - OTP sent successfully - Verification successful - Proper error handling

Side Navigation Bar- Test Cases Overview

Test Information
Test Scenario ID: TC-SN-001
Date: November 20, 2024
Created By: Yinon Shomroni
Tester's Name: Yinon Shomroni

Environment
Device: Samsung Galaxy A54
Android Version: 13/14
App Version: Latest Release
Network: WiFi/4G
Screen Resolution: 1080 x 2340 pixels
- Orientation: Portrait/Landscape

Side Navigation Bar Detailed Test Cases			
Test ID	Feature	Severity	Priority
SN001	Navigation Bar UI Elements	High	P1
SN002	Home Screen Link (מסך הבית)	High	P1
SN003	Personal Profile (פרופיל אישי)	High	P1
SN004	Branches List (סניפים)	High	P1
SN004	Contact Us (צור קשר)	Medium	P1
SN006	Branch Access (הסדרי נגישות בסניפים)	Medium	P2

SN007	Terms & Conditions (לאתר הנגיש)	Low	P2
SN008	Club Settings (תקנון המועדון)	Medium	P3
SN009	Close Button Functionality	High	P1
Test ID	SN001	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni
Preconditions	App launched	Environment	Android V.14 One UI V. 6.1
Test Scenario	Navigation Bar UI Elements	Test objective	Verify proper display and behavior of navigation bar
Test type	UI		
Tests Steps	1. Open navigation drawer by: - Swipe from left edge - Tap hamburger menu 2. Check RTL layout alignment 3. Verify all menu items visibility and order 4. Test text formatting and Hebrew characters 5. Check spacing and touch areas 6. Verify background overlay 7. Test drawer animation speed		
Tests Data			
Expected Result	- Menu opens smoothly from correct side - All items displayed in RTL - Text properly aligned and formatted - Adequate spacing between items - Background dims appropriately - Touch areas sufficiently sized		
Test ID	SN002	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni
Preconditions	Navigation drawer open	Environment	Android V.14 One UI V. 6.1
Test Scenario	Home Screen Navigation	Test objective	Verify home screen navigation functionality
Test type	Navigation (Functionality)		
Tests Steps	1. Click "מסך הבית" 2. Test from multiple app states: - During order process - From profile view - From branches list - During payment flow 3. Check navigation history 4. Verify state preservation		
Tests Data			
36			

Expected Result		- Returns to home screen - Proper state management - Navigation history cleared - Drawer closes after selection	
Test ID	SN003	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni
Preconditions	- Navigation drawer open - Test both logged/non-logged states	Environment	Android V.14 One UI V. 6.1
Test Scenario	Personal Profile Access	Test objective	Verify profile management functionality
Test type	Functionality		
Tests Steps	1. Click "פרופיל אישי" 2. Verify for logged-in user: - Profile information display - Edit capabilities - Order history - Saved addresses 3. Verify for non-logged user: - Login prompt - Registration option 4. Test data persistence 5. Check security measures		
Tests Data			
Expected Result	- Correct profile data display - Secure access control - Proper authentication flow - Data accuracy maintained		
Test ID	SN001	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni
Preconditions	Navigation drawer open	Environment	Android V.14 One UI V. 6.1
Test Scenario	Branches List Directory	Test objective	Verify branches listing and selection functionality
Test type	Functionality		
Tests Steps	1. Click "סניפים" 2. Verify branch list elements: - Branch names - Addresses - Operating hours - Delivery zones - Current status (open/closed) 3. Test branch selection: - Tap branch		
37			

	- View details - Check menu availability 4. Test location-based features: - Distance calculation - Sorting by proximity - Delivery area validation 5. Verify real-time updates: - Operating hours changes - Special hours - Temporary closures		
Tests Data			
Expected Result	- Accurate branch information - Current operating status - Correct delivery zones - Proper distance calculation - Menu variations by location - Real-time status updates		
Test ID	SN005	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni
Preconditions	Navigation drawer open	Environment	Android V.14 One UI V. 6.1
Test Scenario	Contact Us Methods Access	Test objective	Verify contact functionality
Test type	Functionality		
Tests Steps	1. Click "צור קשר" 2. Verify contact methods: - Phone numbers - Email options - Contact form 3. Test form functionality: - Required fields - Validation - Submission 4. Check response handling: - Confirmation messages - Error states - Auto-responses		
Tests Data			
Expected Result	- All contact methods accessible - Form validation works - Proper submission handling - Clear feedback provided		
38			

Test ID	SN006	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni
Preconditions	Navigation drawer open	Environment	Android V.14 One UI V. 6.1
Test Scenario	Branch Accessibility Information	Test objective	Verify accessibility details for branches
Test type	Content (UI)		
Tests Steps	1. Click "הסדרי נגישות בסניפים" 2. Check for each branch: - Accessibility features - Special accommodations - Facility information 3. Verify information accuracy 4. Test navigation between branches 5. Check update frequency		
Tests Data			
Expected Result	1. Click "הסדרי נגישות בסניפים" 2. Check for each branch: - Accessibility features - Special accommodations - Facility information 3. Verify information accuracy 4. Test navigation between branches 5. Check update frequency		
Test ID	SN007	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni
Preconditions	Navigation drawer open	Environment	Android V.14 One UI V. 6.1
Test Scenario	Terms & Conditions Information Access	Test objective	Verify terms and conditions display
Test type	Content (UI)		
Tests Steps	1. Click "לאתר הנגיש" 2. Check content loading: - Document completeness - Formatting - Images/tables 3. Test navigation: - Scrolling - Section links - Back function 4. Verify version control		
Tests Data			
Expected Result	- Complete document loads - Proper formatting - Smooth navigation - Current version displayed		
39			

Test ID	SN008	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni
Preconditions	Navigation drawer open	Environment	Android V.14 One UI V. 6.1
Test Scenario	Club Membership Management	Test objective	Verify club settings functionality
Test type	Functionality		
Tests Steps	1. Click "תקנון המועדון" 2. Test membership features: - Status view - Points balance - Benefits list 3. Verify settings: - Notifications - Communication preferences - Privacy settings 4. Test changes persistence		
Tests Data			
Expected Result	- Accurate membership info - Settings save properly - Changes reflect immediately - Clear status display		

Test ID	SN009	Date	10.11.2024
[Created by]	Yinon Shomroni	Tester's Name	Yinon Shomroni
Preconditions	Navigation drawer open	Environment	Android V.14 One UI V. 6.1
Test Scenario	Navigation Bar Close Button	Test objective	Verify drawer close functionality
Test type	UI/Functionality		
Tests Steps	1. Test close methods: - Close button tap - Swipe to close - Tap outside drawer 2. Check animation smoothness 3. Verify state after closing 4. Test edge cases: - During loading - Mid-animation - Multiple rapid taps		
Tests Data			
Expected Result	- All close methods work - Smooth animation - Proper state restoration - No visual artifacts		

Appendix: Test Case Execution Details with Bug Screenshots and Reproduction Steps

This appendix contains detailed execution logs for all test cases, including steps performed, test data used, and observations. This appendix contains visual evidence of all reported bugs, with detailed reproduction steps.

Detailed Bug Report

[BUR-18] [Special Offers Banner Clickable but Does Not Redirect](#) Created: 10/Mar/25 Updated: 10/Mar/25

Status: To Do

Project: [burgerim](#)

Type: Bug Priority: High

Reporter: [Yinon](#) Assignee: Unassigned

Resolution: Unresolved Votes: 0

Labels: UI

Environment: Android V.14
One UI V. 6.1

Severity: Medium

Description

Summary:

On the **Main Screen**, a **sliding banner** at the bottom displays **special offers**. When a user **clicks on the banner**, it **blinks**, indicating interaction, but **does not redirect anywhere** or open any relevant content.

Steps to Reproduce:

1. Open the mobile app.
2. Scroll to the **bottom of the Main Screen** where the **sliding banner with special offers** is displayed.
3. Tap on the banner.
4. Observe that the **banner blinks but does not open a relevant page or offer details**.

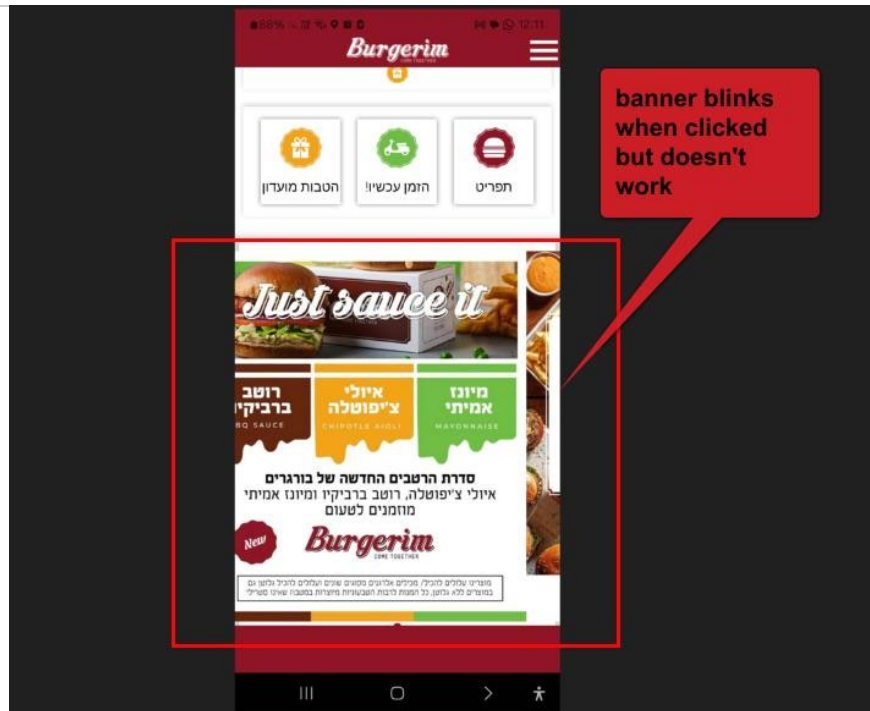

Expected Result:

- Tapping the **special offers banner** should:
 - Redirect the user to a **dedicated offers page**.
 - Open a **popup with offer details**.
 - Take the user to a **relevant order screen** if the offer is related to a product/service.

Actual Result:

- The **banner blinks**, but **nothing happens**—no navigation or relevant content is opened.

[BUR-17] [Job Application Form Allows Invalid Inputs](#) Created: 10/Mar/25 Updated: 10/Mar/25

Status:	To Do
Project:	burgerim

Type:	Bug	Priority:	Low
Reporter:	Yinon	Assignee:	Unassigned
Resolution:	Unresolved	Votes:	0
Labels:	UI		
Environment:	Android V.14 One UI V. 6.1		

Severity:	Medium
-----------	--------

Description

Summary:

The **Job Application Form** in the **web app (Jobs section)** does not properly validate user inputs. The form **accepts unrealistic or incorrect data** in multiple fields, allowing users to submit **invalid information**, which could lead to **data integrity issues and unqualified applications**.

Steps to Reproduce:

1. Open the **web app**.
2. Navigate to the **Jobs** section.
3. Fill in the **Job Application Form** with the following invalid inputs:
 - **Name/Surname**: Enter numbers or special characters (e.g., "John123" or "@#\$Doe").
 - **Age**: Enter **103** (or any unrealistic age).
 - **City**: Input an **incorrect or nonexistent city name** (e.g., "XYZ123").
 - **Application Content (Free Text Box)**: Enter **random characters or gibberish** (e.g., "@@##\$\$ XYZ!!").
4. Submit the form.
5. Observe that the form **accepts all invalid inputs** without error messages or validation warnings.

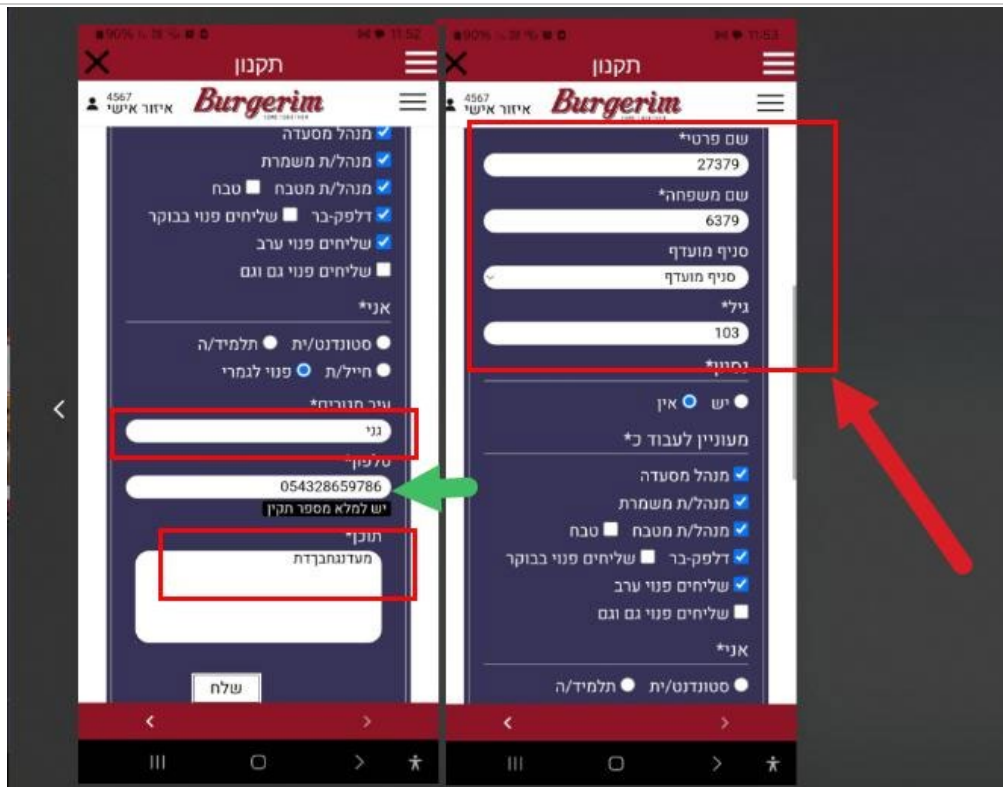

Expected Result:

- The form should validate inputs **before submission**:
 - **Name/Surname**: Only **alphabetic characters, hyphens, and apostrophes** should be allowed.
 - **Age**: Should be limited to a **realistic range** (e.g., 18–70).
 - **City**: Should match **valid location names** (or use an autocomplete feature).
 - **Application Content**: Should **not allow excessive special characters or gibberish** (consider a word count limit).

Actual Result:

- The form **accepts invalid inputs**, allowing:
 - **Numbers & symbols** in Name/Surname.
 - **Unrealistic age** (e.g., 103 years old).
 - **Incorrect/nonexistent city names**.
 - **Unfiltered text** in the application content box.

One UI V. 6.1

Severity: Medium

Description

Summary:

In the **accessible web app**, navigating to the **Branches** page reveals a **fixed search field box** at the top of the screen. When scrolling **up or down**, the **search box remains static**, causing it to **overlap and obscure branch information**, reducing readability and usability.

Steps to Reproduce:

1. Open the **accessible web app**.
2. Navigate to **Branches**.
3. Scroll **up and down** while viewing the branch list.
4. Observe that the **search field box remains fixed at the top**, hiding part of the branch list.

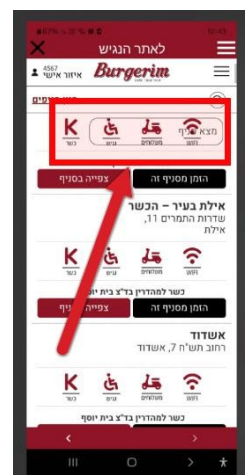

Expected Result:

- The **search box should either**:
 - **Scroll with the page** like other elements.
 - Be **semi-transparent** when scrolling.
 - Collapse or have a **hide/show behavior** to avoid obstructing content.

Actual Result:

- The **search field box remains fixed**, blocking branch names and details while scrolling.
- Users may find it **difficult to view or select branches** due to the obstruction.

Description

Summary:

When clicking "לאחר הנגיש" from the **sidebar**, the app correctly redirects to the intended page. However, the **top title** of the page incorrectly remains "לאחר הנגיש", which is misleading and does not accurately represent the content of the page.

Steps to Reproduce:

1. Open the mobile app.
2. Open the **sidebar menu**.
3. Tap on "לאחר הנגיש".
4. Observe that while the app redirects correctly, the **top page title** still displays "לאחר הנגיש", causing confusion.

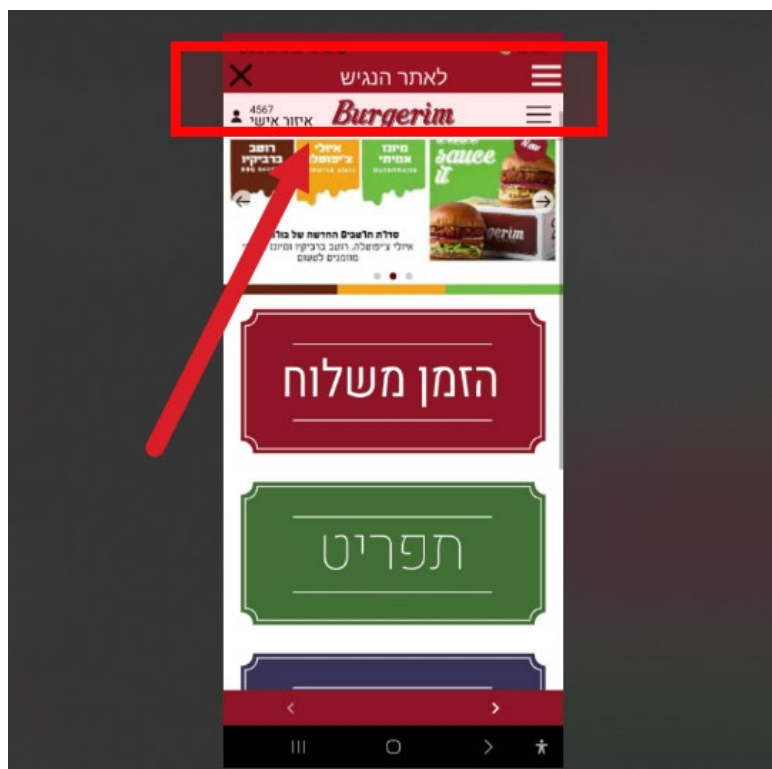

Expected Result:

- The **title at the top of the page** should reflect the **actual content** of the page instead of displaying "לאחר הנגיש".
- The correct title should be something like "אתר נגיש" or the name of the redirected page.

Actual Result:

- The top title remains "לאתר הנגיש", making it unclear if the user has successfully navigated to the correct page.

[BUR-14] "[Contact Us](#)" Page Displays Application Error Created: 10/Mar/25 Updated: 10/Mar/25

Status:	To Do
Project:	burgerim

Type:	Bug	Priority:	Medium
Reporter:	Yinon	Assignee:	Unassigned
Resolution:	Unresolved	Votes:	0
Labels:	Functionality		
Environment:	Android V.14 One UI V. 6.1		

Severity:	Medium
-----------	--------

Description

Summary:

When navigating to the "**Contact Us**" page from the **sidebar menu**, a **blank screen** appears, displaying an **error message** instead of the expected content. The error message states:

"**Application error: A client-side exception has occurred while loading [6331.comosense.net](#) [see browser control].**"

This prevents users from accessing **contact details or support options**.

Steps to Reproduce:

1. Open the mobile app.
2. Open the **sidebar menu**.
3. Tap on "**Contact Us**".
4. Observe that the **page does not load**, and instead, an **application error message** appears.

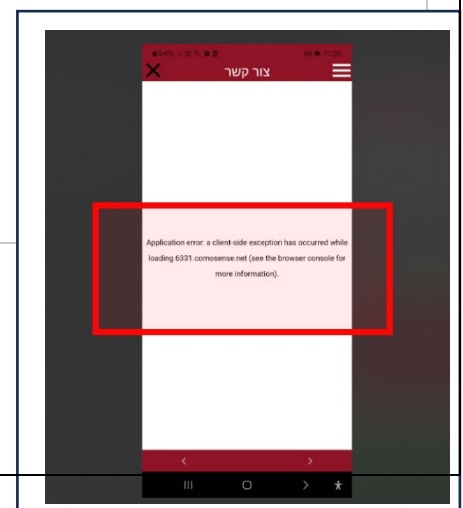

Expected Result:

- The **Contact Us** page should load correctly and display relevant **support/contact information**.
- No error messages should appear.
- If an external link is being loaded, it should be **handled properly without breaking the page**.

Actual Result:

- A **blank screen** appears.
- An **error message about a client-side exception** is displayed.
- The user cannot access **contact details**.

Description

Summary:

On the **Personal Profile** screen, tapping the **General Terms** button opens the **Data Collection/Terms** section. In this section, the words "**Privacy Policy**" appear as **underlined and blue**, indicating they are a clickable link. However, when pressed, the text **blinks (suggesting interaction) but does not open anything**.

Steps to Reproduce:

1. Open the mobile app.
2. Navigate to the **Personal Profile** screen.
3. Tap on **General Terms**.
4. In the **Data Collection/Terms** section, locate the "**Privacy Policy**" text.
5. Tap on "**Privacy Policy**" and observe its behavior.

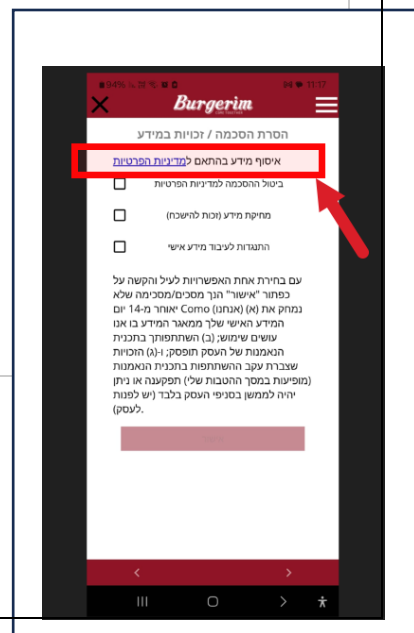

Expected Result:

- Tapping "**Privacy Policy**" should **open the privacy policy page** in either:
 - A new in-app screen.
 - An external browser.
 - A PDF viewer (if it's a document link).
- If there is no privacy policy link available, the text **should not appear as a clickable link**.

Actual Result:

- The "**Privacy Policy**" text appears **underlined and blue**, indicating it is a clickable link.
- When tapped, it **blinks as if responding to a click**, but **nothing opens**.
- The user is **left with no way to view the privacy policy**.

Description

Summary:

On the **Personal Profile** screen, tapping the **General Terms** button and then selecting **Terms of Privacy** leads to an **empty page** instead of displaying the privacy terms content. This prevents users from accessing important legal information about data privacy.

Steps to Reproduce:

1. Open the mobile app.
2. Navigate to the **Personal Profile** screen.
3. Tap the **General Terms** button.
4. Select **Terms of Privacy** from the options.
5. Observe that the page is **empty** instead of displaying privacy terms.

Expected Result:

- The **Terms of Privacy** page should display the **full privacy policy content**.
- If the content is unavailable, an **error message** should inform the user (e.g., *"Privacy Terms are currently unavailable. Please try again later."*).
- The app should not load a blank screen.

Actual Result:

- The **Terms of Privacy** page is completely **empty**.
- No error message or placeholder text appears.

Description

Summary:

When a user navigates to the **Terms of Usage** page via the **General Terms** button in the **Personal Profile** screen, the page opens but **displays a completely empty screen**. No content, text, or links appear, making it impossible for users to read the terms.

Steps to Reproduce:

1. Open the mobile app.
2. Navigate to the **Personal Profile** screen.
3. Tap the **General Terms** button.
4. Select **Terms of Usage**.
5. Observe that the page **loads but is completely empty**.

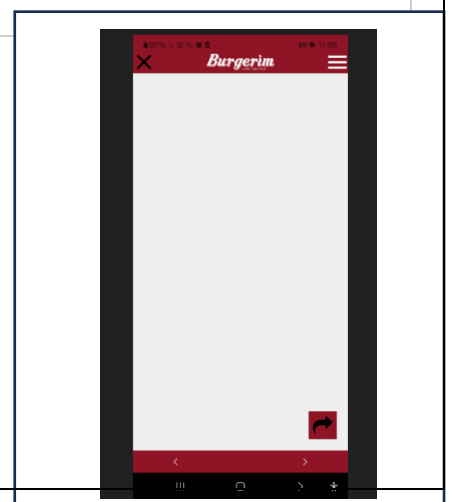

Expected Result:

- The **Terms of Usage** page should display the correct legal content related to app usage.
- If the content is missing due to an error, an appropriate **message should be displayed**, such as:
"Terms of Usage are currently unavailable. Please try again later."

Actual Result:

- The **Terms of Usage** page opens, but it is **completely blank** (no text, links, or content appear).

-----------	------	--------

Description

Summary:

On the **Update Personal Profile** screen, the **Name** and **Surname** fields allow users to input **numbers and special characters** (e.g., 1234, @#\$%^&). **This makes it possible to *register an invalid name**, which affects data integrity and user authenticity.

Steps to Reproduce:

1. Open the mobile app.
2. Navigate to the **Profile** screen.
3. Tap on **Update Profile**.
4. In the **Name** field, enter a string containing **numbers and special characters** (e.g., "John123!!").
5. In the **Surname** field, enter a **numeric string or special characters** (e.g., "###@").
6. Save the profile.
7. Observe that the app **accepts the invalid name and surname** without any validation error.

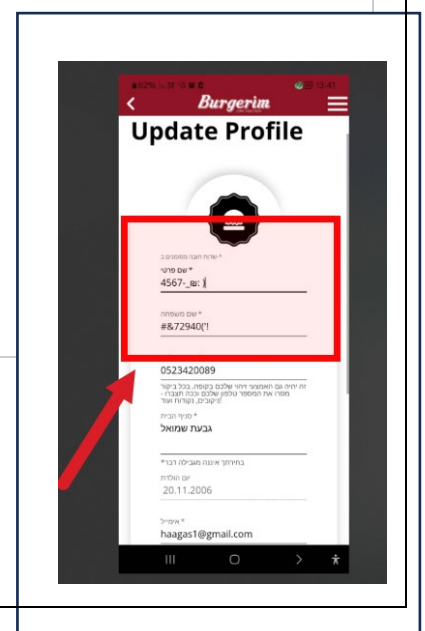

Expected Result:

- The **Name** and **Surname** fields should only allow **alphabetic characters** (with an exception for hyphens or apostrophes in legitimate names).
- If a user enters **numbers or special symbols**, an **error message** should appear: *"Invalid name format. Please enter letters only."*
- Validation should **block submission** of an invalid name.

Actual Result:

- The app **accepts numbers and special characters** in the **Name** and **Surname** fields.
- Users can **register with unrealistic or invalid names**.
- No error message is displayed.

[BUR-9] [Instagram Button on Branch Details Page- "Open Instagram" Button Unresponsive](#) Created: 10/Mar/25 Updated: 10/Mar/25

Status: To Do

Project: [burgerim](#)

Type: Bug

Priority: Medium

Reporter: [Yinon](#)

Assignee: Unassigned

Resolution: Unresolved

Votes: 0

Labels: Functionality, Integration

Environment: Android V.14

One UI V. 6.1

Severity: High

Description

Summary:

On the **Branch Details** page, there is an **Instagram logo button** that suggests it will redirect users to the branch's Instagram page. When pressed, a screen appears asking if the user wants to open the profile in the **Instagram app**. However, pressing the **"Open Instagram"** button does **nothing**, leaving the user stuck on the same screen.

Steps to Reproduce:

1. Open the mobile app.
2. Navigate to the **Branches** screen from the side menu.
3. Select any branch to view its **full details**.
4. Tap the **Instagram logo button**.
5. A screen appears asking if you want to **see the full profile on the Instagram app**.
6. Tap the **"Open Instagram"** button.
7. Observe that **nothing happens**—the Instagram app does not open, and the user remains stuck on the same screen.

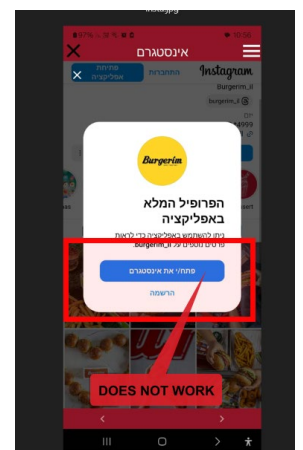

Expected Result:

- Tapping **"Open Instagram"** should **redirect the user to the Instagram app**, displaying the branch's profile.
- If the Instagram app is not installed, it should **open the profile in a browser**.
- If there is an issue with redirection, an **error message** should be displayed instead of an unresponsive button.

Actual Result:

- The **"Open Instagram"** button is unresponsive.
- The user remains on the same screen with no way to proceed.

Description

On the **Branch Details** page, there is a **Facebook logo button** that suggests it will redirect users to the branch's Facebook page. However, pressing the button **opens an empty screen instead of the expected Facebook page**. This issue occurs for **all branches**, making the feature **non-functional**.

Steps to Reproduce:

1. Open the mobile app.
2. Navigate to the **Branches** screen from the side menu.
3. Select any branch to view its **full details**.
4. Tap the **Facebook logo button** on the branch details page.
5. Observe that an **empty screen opens instead of the branch's Facebook page**.

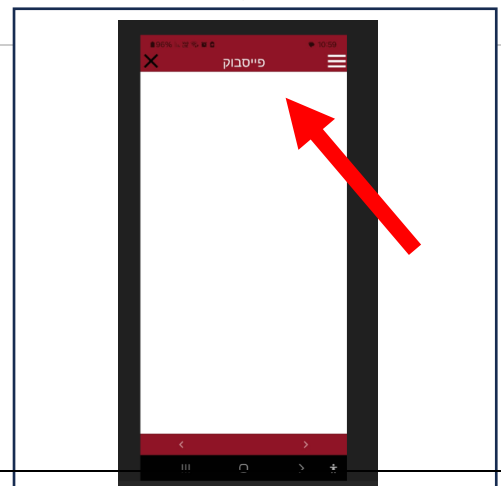

Expected Result:

- Tapping the **Facebook button** should **redirect to the correct Facebook page** for the selected branch.
- If the app is not installed, it should **open Facebook in a browser**.
- If there is no valid Facebook link, the button should be **disabled or removed**.

Actual Result:

- Instead of opening the Facebook page, an **empty screen** appears.
- Issue is **consistent across all branches**, suggesting a systemic issue with the Facebook link implementation.

Description

Summary:

When a user selects a **branch** from the **Branches** screen to view its full details, the **branch details page opens correctly**. However, pressing the **phone's built-in back button** does not navigate back to the **Branches list screen**. The button appears **unresponsive**, making it difficult for users to return to the full list.

Steps to Reproduce:

1. Open the mobile app.
2. Navigate to the **Branches** screen from the side menu.
3. Tap on any branch to view its **full details**.
4. Press the **phone's built-in back button** (Android gesture or physical button).
5. Observe that the app **does not navigate back** to the full list of branches.

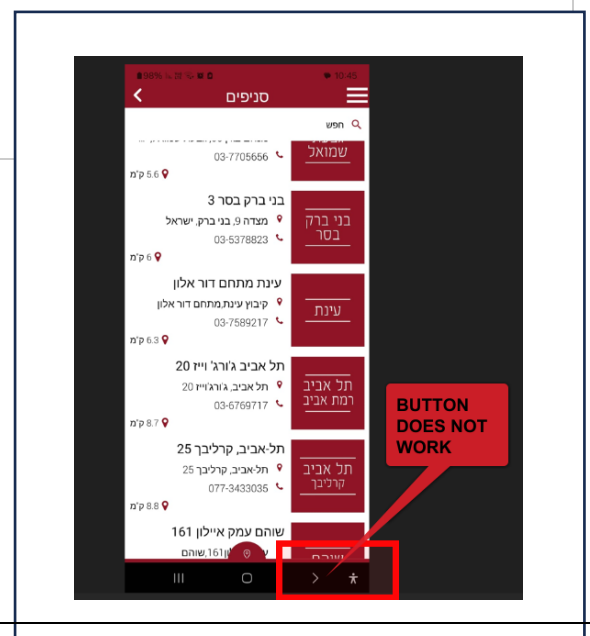

Expected Result:

- The **built-in back button** should **navigate** back to the **Branches list screen**.
- Alternatively, an in-app back button is available.

Actual Result:

- The **phone's back button** does nothing.

Description

Summary:

When a user navigates to the **Branches** page via the app's sidebar, a list of branches appears, but the **map function does not work**. The selected branch is **not displayed on the map**, making it difficult for users to locate the branch visually.

Steps to Reproduce:

1. Open the mobile app.
2. Open the **side menu** and tap on **Branches**.
3. Observe that a **list of branches** is displayed.
4. Tap on any branch to view it on the map.
5. Observe that the **map does not update or show the selected branch**.

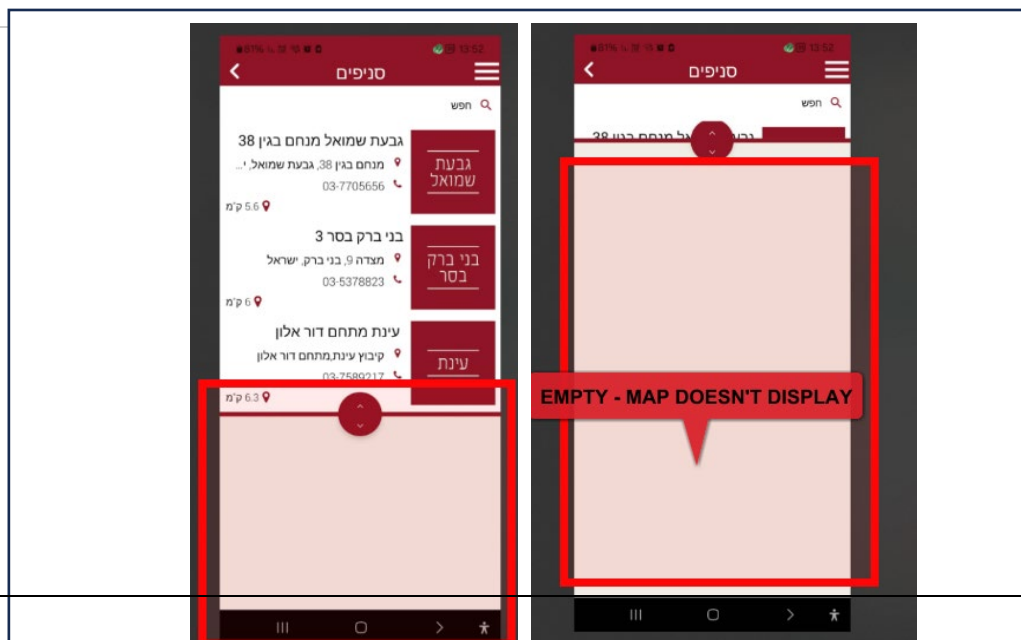

Expected Result:

- The map should **display the selected branch's location**.
- If tapping a branch is expected to trigger a **marker or zoom-in function**, it should work properly.

Actual Result:

- The **map does not load or update** when selecting a branch.
- Users **cannot see branch locations visually**, impacting usability.

Description

Summary:

On the **Main Screen**, tapping the "**Menu**" button displays a static image (JPG) instead of redirecting the user to an interactive ordering menu.

Steps to Reproduce:

1. Open the mobile app.
2. On the **Main Screen**, tap the "**Menu**" button.
3. Observe that a **menu image (JPG)** appears instead of a navigable order menu.

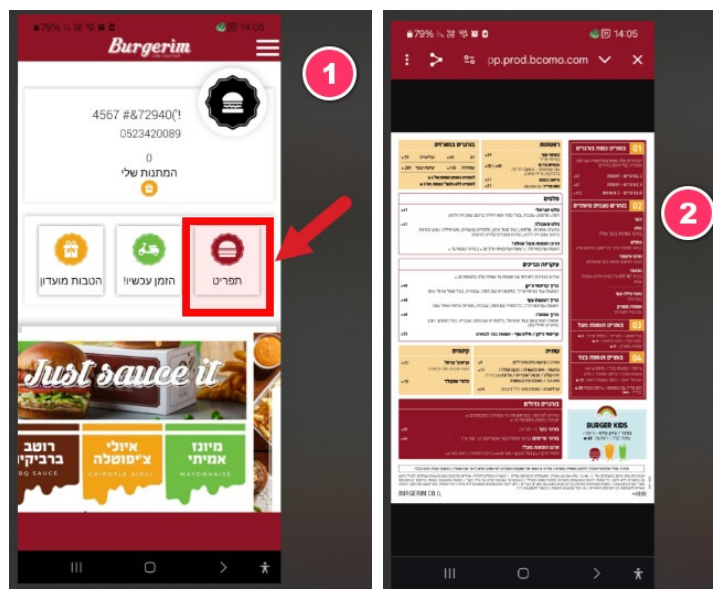

Expected Result:

- The **Menu** button should open an interactive ordering menu OR clearly indicate that it only displays an image.
- If the menu is just informational, consider making this **clearer in UI/UX design**.

Actual Result:

- The user sees a **static image (JPG)**, which does not allow interaction or ordering.

Resolution:	Unresolved	Votes:	0
Labels:	Localization, UI		
Environment:	Android V.14 One UI V. 6.1		

Severity:	Medium
-----------	--------

Description

Summary:

After signing up, when a user navigates to the **"Update Profile"** screen, the title appears in **English instead of Hebrew** and is **poorly designed**. This disrupts the UI consistency and usability, especially since the rest of the design is in Hebrew.

Steps to Reproduce:

1. Open the mobile app.
2. Complete the **sign-up process** and navigate to the **Profile** screen.
3. Tap the **"Update Profile"** button.
4. Observe that the **screen title appears in English** instead of Hebrew and does not match the expected design.

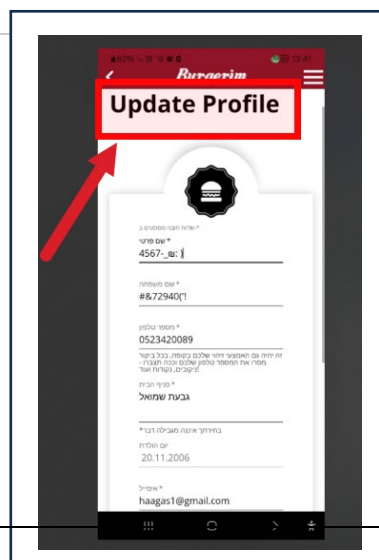

Expected Result:

- The **title should be in Hebrew** (consistent with the rest of the app).
- The **design should be consistent** with other screens (e.g., font size, alignment, colors).

Actual Result:

- The **title appears in English** instead of Hebrew.
- The design appears **poorly formatted** (describe specifics: incorrect font, alignment, styling, or spacing issues).

[BUR-3] ["My Gifts" Screen- Gift Selection Does Not Redirect to Order Placement](#) Created: 10/Mar/25 Updated: 10/Mar/25

Status:	To Do
Project:	burgerim

Type:	Bug	Priority:	Medium
Reporter:	Yinon	Assignee:	Yinon
Resolution:	Unresolved	Votes:	0
Labels:	Functionality, UX		
Environment:	Android V.14 One UI V. 6.1		

Severity:	High	Medium
-----------	------	--------

Description

Summary:

When a user taps on a gift in the **"My Gifts"** screen, nothing happens. The app does not redirect the user to a screen where they can use the gift immediately. This forces users to remember and manually apply their gifts only at checkout, leading to **poor usability and a disrupted user experience**.

Steps to Reproduce:

1. Open the mobile app.
2. Navigate to the **"My Gifts"** screen.
3. Tap on any available gift.
4. Observe that **nothing happens**—no redirection, pop-up, or action is triggered.

Expected Result:

- Tapping on a gift should either:
 - Redirect the user to a **"Place an Order"** screen with the gift applied.
 - Show an option to **apply the gift** when ordering.
 - Display a **confirmation pop-up** explaining how to redeem the gift.

Actual Result:

- **No action is triggered**, and the user must remember to use the gift manually at checkout.

Description

When a user taps the **"Place an Order"** button from the **Personal Profile** screen, the app redirects to the restaurant's web app. However, the user is required to log in again, even if they were already authenticated within the mobile app.

Steps to Reproduce:

1. Open the mobile app.
2. Navigate to the **Personal Profile** screen.
3. Tap the **"Place an Order"** button.
4. The app redirects to the **restaurant's web app**.
5. Observe that the user is required to **log in again**, even though they were already authenticated in the mobile app.

Expected Result:

The user should be seamlessly redirected to the **restaurant's web app** while maintaining their authentication session.

Actual Result:

The user is **prompted to log in again**, disrupting the ordering experience.

Additional Notes:

- The issue suggests a **session token is not being passed** properly between the app and the web app.
- If the restaurant's web app is managed by a third party, integration/API authentication should be reviewed.
- Users may abandon their order if they are required to **log in again unnecessarily**.
- Consider investigating whether **OAuth tokens, cookies, or session storage** are being properly shared between the two environments.

Description

The phone's built-in back button does not navigate back from the **Personal Profile** screen to the **previous screen**. The button appears unresponsive.

Steps to Reproduce:

1. Open the mobile app.
2. From the **Home Screen**, tap on the **Personal Profile** button/icon to open the **Personal Profile** screen.
3. Attempt to go back by tapping the **device's built-in back button** (Android navigation gesture or physical button).

Expected Result:

The app should navigate back to the **previous screen** (Home Screen or the screen from which the Personal Profile was accessed).

Actual Result:

The built-in **back button does not respond**, and the user remains stuck on the **Personal Profile** screen.

Additional Notes:

- The in-app **back button (if available)** may still function.
- Issue occurs **consistently/intermittently** (specify).
- No error message or UI feedback appears when the back button is pressed.
